Wolbert's

2024 AND GETTING READY

Healthy Landscapes And Pest Free Homes

Time to get the plan going on **YOUR** healthy landscape. Spring will be here before we know it and our schedule has already been filling up. Our focus for Spring 2024 is **aeration**, **irrigation** services, and our new Wolbert's **Water Wise** program.

There is plenty we can do now to make sure your property is ready for Spring and Summer. Thank you for taking the time to read this. We want all our customers informed about what we offer so you can have the best-looking yard around to enjoy with those you care about.

AERATION

- Have a thick thatch layer?
- Not sure why your lawn is so spongy?
- Have poor drainage?
- Is your soil compacted?
- Or is your grass just having a hard time?

****An ANNUAL aerating and over-seeding plan might be just what your lawn needs.***

CALL, TEXT, OR EMAIL US TODAY!

Irrigation

Set it and forget it! **NOW OFFERING** Spring startup and programming, audits, and minor repairs. Let us do what we do best - beautiful landscapes! Our goal is to make your life easier and more simple. Text us today to get on our **2024** schedule.

Maximize Your Irrigating With Wolbert's Water Wise

We understand irrigating your lawn can be costly and often difficult. Our new Water Wise program puts you ahead of the hot dry summers with water penetration and infiltration in soil, enhances irrigation efficiency, reduces runoff and evaporation, and ultimately decreases water usage in turf. **Ask about this new program now to prepare for this season.**

Supplemental Turf Treatments - Aeration

Disease management, wetting agents, weed grass management, soil pH correction, and *aeration* are some of our most successful programs for getting and **KEEPING** a fantastic lawn. Last year we saw amazing results with our *aeration* clients. Consider adding this to your arsenal of protection and management this year.

Product Notes

Our Exclusive Premium Liquid Bio-Fertilizer Blend Always Includes:

- SoilSeeds® organic microbes aid in nutrient release and over time help reduce thatch.
- SuperTrace® packed full of thirteen essential trace minerals in organic acids.
- The addition of a nitrogen stabilizer helps to minimize leaching.
- Our bio-fertilizer never includes phosphorous, as excess phosphorous can be harmful to aquatic ecosystems.
